```
primer containing a Not I site Double strand CDNA was size selected according to mRNA size fraction, ligated with BCOR I adaptor. digested with NotI and then cloned directionally into pYX-Asc vector. The library tag directionally into pYX-Asc vector. The library tag is equence located between the Not I site and the polyA tail is CGAACTGAAT. This library was created for the University lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Distitute of Mental Health (NIMH); Hemin Chin , Ph.D., program coordinator."

//note="Organ: brain; Vector: pWE18S-F13; 1st strand cDNA was primed with an oligo(dT) primer
//organity of Drain; Jouble-stranded cDNA was ligated to a Drain; adaptor [CTTGGCCTACGG], digested and cloned into distinct brain; sites of the pWE18S-F13. XhoI sites just outside the Drain; sites can be used to isolate the cDNA insert. Size selection was performed to exclude fragments <1.5 kb. Library was constructed by Sugano et al. (University of Tokyo, Institute of Medical Science). Custom primer used for sequencing: 5' end primer [CTTCTGCTCTAAAAGCTGG], 3' end primer

Oligo-dT track not found, Not I site shown in beginning of sequence is likely internal to the message. cDNA library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP CDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP CDNAs whose availability will be considered under appropriate and limited collaborative arrangements The tissue for this library was contributed by Dr. Xin-Yuan Fu, Yale University School of Medicine The following repetitive elements were found in this cDNA sequence: 202-211,
Seq primer: M13 Forward
POLYA=NO.

/note="Organ: brain; Vector: pXX-Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according to Solice_2: Not I; The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured mRNW was size fractionated on a 1% agarose gel: First strand cDNA synthesis was primed with an olign-dT primer containing a Not I site. Double stranded colligated with EcoR I adaptor, digested with Not I, and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is TGAGAGAGC. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institutes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator:"

Patent No. 6639063
GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Johett, S.
APPLICANT: Glordano, J.Y.
TITLE OF INVENTION: ESTS and Encoded Human Proteins.
FILE REFERENCE: GENSET. 054R2
CURRENT APPLICATION NUMBER: US/09/621,976
CURRENT FILING DATE: 2000-07-21
NUMBER OF SEQ ID NOS: 19335
SOUTWARE: Patent.pm
SEQ ID NO 1403
LIBRICH: 524

US-09-621-976-18033
Sequence 18033, Application US/09621976
Patent No. 6639063
GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Glordano, J.Y.
TITLE OF INVENTION: ESTS and Encoded Human Proteins.
FILE REFRENCE: GENGET.054PR.2
CURRENT APPLICATION NUMBER: US/09/621,976
CURRENT PILING DATE: 2000-07-21
NUMBER OF ESQ ID NOS: 19335
SOFTWARE: PATENT PO

Sequence 425, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: WOLLEC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNI FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTOS9-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-66-04
NUMBER OF SEQ ID NOS: 8252

                                                                                                         This protein has been putatively identified as a human transforming growth factor (TGF) alpha analogue, TGF-alpha-HIII. The protein can still be an analogue, TGF-alpha-HIII. The protein can still be an analogue, TGF-alpha-HIII. The protein can train be used for therapeutic purposes for restoration or enhancement of pathologies such as ALDS dementia and senile dementia, to treat coular disorders, e.g. corneal inflammation, to destroy target cells, to treat tumours, kidney or liver disorders or to treat wounds, burns or ulcers. The polypeptide can also be used in the modulation of angiogenesis, bone resorption, immune response, and synaptic and neuronal effector functions, or the arachidonic acid cascade. It can also be used in hyperproliferative disorders such as inflammation or psoriasis and for alopecia, hair loss or other skin conditions which affect hair follicular development. Antagonists to TGF-alpha-HIII can be used for treating tumours or skin disorders such as sporiasis. The products can also be used for diagnosis and detection of the above disorders can also be

This sequence represents the EGF-like homologue PRO240. The invention relates to antibodies (Ab) that bind to any of the polypeptides (I) designated PRO187; PRO214; PRO214, PRO210; PRO210; PRO216; PRO216, or EBAF-2. The Ab, or other agents that inhibit expression and/or activity of (I) are used: (i) to inhibit growth of tumours, and (ii) as diagnostic/prognostic reagents for detection or quantification of (I) in cells or tissues, by standard immunoassays, with overexpression of (I) in indicative of cancer. For therapeutic use, the Ab may be conjugated to a toxin, chemotherapeutic agent or radioisotope. Genes expressing (I), many of which are growth factor homologues, are overexpressed in some cases of

be useful as carcinostatic agents or as antigens for preparing antibodies against the proteins. The cDNAs can be used as probes for gene diagnosis and gene sources for gene therapy, as well as for large-scale expression of the proteins. The HP01498 (see AAY13939) protein may be associated with signal transduction associated with approals, and therefore useful in inhibition of apoptosis. The HP01962 (see AAY13943) protein can be used to treat diseases associated with phopshatidylethanolamine N-methyltransferaes. The proteins are identified by the presence of a hydropiobic transmembrane region, knowledge of the protein function is not required, as in e.g. methods of expression cloning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  132

treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthrogathies.

Systemic sclerosis, idiopathic inflammatory myopathies, Slogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune or immune-mediated skin diseases, allegric disease, immunological cor immune-mediated sand transplantation associated diseases including graft rejection and graft-versus-host-disease. AAC58197 to AAC58578 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAC58579 to AAC58642 and AAB33474 represent human PRO polymuoleotide and protein sequences given in the exemplification of the present invention

```
autoimmune thrombocytopaenia; immune-mediated renal disease; demyelinating disease; hepatobiliary disease; Whipple's disease; infilammatory bowel disease; gluten-sensitive enteropathy; autoimmune disease; immune-mediated skin disease; allergic disease; immune-tien transplantation associated disease; graft rejection; graft-versus-host-disease.

Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus. KP, Goddard A, Gurney AL, Hebert C, Henzel W; Pan J, Pennica D, Shelton DL, Smith V; , Watanabe CK, Wood WI, Yan M; Ashkenazi AJ, Baker KP, Kabakoff RC, Lu Y, Pan Tumas D, 2000-572271/53. N-PSDB; AAC58584 Stewart TA,

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a human PRO240 amino acid sequence. PRO240 shares sequence homology with the D. melanogaster serrate precursor protein and the Gallus gallus C-serrate—I protein. The PRO240 gene is concated on chromosome 2. The invention relates to isolated antibodies which bind to a polypeptide. The "PRO" polypeptides are encoded by genes which bind to a polypeptide. The "PRO" polypeptides are encoded by genes which bind to a polypeptide. The "PRO" polypeptides are used in the genome of tumour cells. Vectors and host cells comprising the nucleic acid encoding the antibodies are used in the production of the antibodies. The antibodies are used in the tent are used for inhibiting the growth of tumour cells and identifying compounds that inhibit a biological or immunological activity of and/or expression of a PRO17 polypeptide. The antibody can be used in antibody dependent enzyme mediated prodrug therapy (ADEPT) by conjugating the antibody to a prodrug antibodies can be fluorescently labelled and monitored by light microscopy, flow cytometry or fluorimetry for diagnosis and prognosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         121

                             The present sequence is one of twenty eight novel PRO polypeptides. The PRO polypeptides and their agonists, including antibodies, peptides, and small molecule agonists, may be used to treat various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, central nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, glial, astrocytal, hypochalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunological
                                                                                                                                                                                                                                                                                                                         92
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, TGF alpha HIII, transforming growth factor alpha HIII, cancer, diagnostic, therapeutic, immune disorder, multiple sclerosis, systemic lupus erythematosus, human immuno-deficiency virus, HIV, hyperproliferative disorder, Gaucher's disease, cardiovascular disease, Scimitar syndrome, Chaga's cardiomyopathy, coronary arteriosclerosis;

```
The sequence represents the amino acid sequence of human transforming growth factor (TGF) alpha HIII TGF alpha HIII nucleic acid and protein may be used in the prevention, diagnosis and treatment of diseases.

CC dasociated with inappropriate polypeptide expression, for example immune discorders (e.g. multiple sclerosis, systemic lupus erythematosus and human immuno-deficiency virus (HIV) infections), hyperproliferative disorders (e.g. cancers and Gaucher's disease), cardiovascular diseases (e.g. scimtar syndrome, Chaga's cardiomyopathy and coronary articosclerosis), anaiogenic disorders (e.g. corneal graft necessis), anaiogenic disorders (e.g. corneal graft necessis), anaiogenic disorders (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), infectious diseases and/or for promoting wound healing, regeneration and/or chemotaxis (full details given in specification). Additionally, the nucleic acid may be used to produce the secreted polypeptides, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. It may also be used as a DNA probe in diagnostic assays to detect and quantitate the presence of similar nucleic acid castays to therefore which patients may be in need of restorative therapy. The polypeptides may also be used as antigens in the production of antibodies against TGF alpha HIII and in assays to identify modulators of TGF alpha HIII antibodies may also be used as diagnostic agence of detecting the presence of TGF alpha HIII in samples (e.g. by enzyme linked immunosorbant assay (BLISA))
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (TGFa),
angiogenic disorder; corneal graft; neovascularisation; wound healing; diabetic retinopathy; neurological disorder; Huntington's chorea; Alzheimer's disease; Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid encoding human transforming growth factor alpha III useful for preventing, diagnosing and/or treating e.g. Cancer and Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   229
